SUMMARY

Informatics Engineering student at Gunadarma University focused on Data Science, Machine Learning, and AI. Experienced in building end-to-end ML pipelines and full-stack applications, from data preprocessing and model development to deployment, spanning health-risk prediction, HR/competency analytics, banking lead scoring, e-commerce analytics, and NLP-based sentiment analysis.

SKILLS

Languages: Python, SQL

Machine Learning & Deep Learning: Scikit-learn, TensorFlow/Keras, XGBoost, NLP (IndoBERT, Sastrawi)

Data Analysis & Visualization: Pandas, NumPy, EDA, Data Wrangling, Statistical Analysis

Web Development: FastAPI, React, Vite, Tailwind CSS

Tools: Git, SQLite, PostgreSQL, Google Sheets API

PROJECTS

VitaCheck — Health Risk Prediction System

- Built a full-stack ML system (CRISP-DM) classifying users into Low/Medium/High health risk on a 15,000-row lifestyle dataset; Logistic Regression selected for highest recall (~97%) on the High Risk class.
- Backend: FastAPI, JWT auth, SQLite. Frontend: React, Vite, Tailwind CSS, Recharts.

RumahKarir

- AI-based system identifying employee competency gaps from performance, skills, experience, and career interest data to generate personalized career development recommendations.
- Applied NLP (IndoBERT, Sastrawi) against SKKNI/SFIA standards; redesigned the Gap Score methodology using IQR-based thresholding to address class imbalance.

Predictive Lead Scoring Portal for Banking Sales

Built a predictive system that analyzes prospective customer data to generate a lead score indicating the likelihood of conversion, supporting bank sales prioritization.

E-Commerce Data Analysis

Performed data analysis and visualization on e-commerce data to identify sales trends and customer behavior patterns.

Sentiment Analysis on the Shopee App

Built an automated positive/negative sentiment classifier for Shopee app reviews scraped from the Google Play Store, using NLP and machine learning.

EXPERIENCE

Machine Learning Cohort

2025 – 2026

ASAH led by Dicoding

- Built and deployed ML models for real-world use cases using Python and TensorFlow/Keras, covering the full lifecycle from data preparation to deployment.

Data Scientist Cohort

2026

Coding Camp powered by DBS Foundation

- Gained hands-on experience in data preprocessing, exploratory data analysis, feature engineering, model building, model evaluation, and data visualization using Python and related data science libraries, while leading the team as capstone project leader.

EDUCATION

Gunadarma University

2023 – Present

Bachelor's Degree, Informatics Engineering — Depok, Jawa Barat
